Is your backup system **secure and simple?**

Data Protection Solutions

Is your backup system secure and simple?

GBS Customers say yes. Why? Because they are not limited to one level of protection. Today, data is mission critical in many industries. Traditional backup tapes or onsite media options offer baseline solutions. Our Data Protection Solution makes it easy to achieve higher levels of security, reliability, expedited data restoration, confidence, and productivity by incorporating our highly encrypted, automated online backups.

We offer customers the ability to automatically back up important files to a secure data center via the Internet, eliminating the risk of losing critical information to faulty backup tapes and making it easier to restore lost data.

Secure

- State-of-the-art servers in wholly-owned data centers on multiple sites
- Full systems redundancy
- Backup power system (UPS battery backup and diesel generator)
- Climate-controlled environment
- 24/7 system administration and onsite security
- Biometric security access
- Encryption for entirely secure backups
- Backup is compliant with HIPAA regulations
- You see the backup data; we do not!

Easy and Convenient

- User-friendly client software
- "Getting Started Wizard" for simple set up of backups
- Comprehensive, automatic backup scheduling for hands-free backups
- File selection filters so you can choose only your most important files for backup
- FastBIT binary incremental backups that reduce backup times and bandwidth requirements up to 99% by backing up changes rather than the entire file again
- Compression for quick backups and restoration
- Silent mode so backups run invisibly in the background
- Supports dial-up networking, Internet and TCP/IP network protocols

Simplify your backups – **with GBS.**
