Enterprise & Network Solutions

Should you look internally or externally for outside-the-box **productivity solutions?**

GBS

Should you look internally or externally for outside-the-box productivity solutions?

The answer is simple – when your enterprise and network partner provides added-value expertise and generates cost-efficiencies that internal resources can't deliver.

Enterprise & Network Solutions

GBS Enterprise & Network Solutions

With superior technical knowledge and customer service, we provide a customized set of enterprise and network solutions specific to your company's objectives. And, we make sure your enterprise and network systems are operating safely and efficiently so you can focus on your business.

- Our staff continually updates their skills and certification in emerging technologies.

- Our strategic sourcing network spans the largest list of U.S. distributors, as well as top-tier manufacturers.

Computer Lifecycle Management

GBS determines an affordable computer setup and software plan perfect for each employee and department, saving your company even more money in the long run. That's because our quick and flexible delivery minimizes workflow interruptions and our proactive approach avoids future hardware failures, conserves energy and increases computer and employee productivity.

Software Licensing

As an authorized source for popular software publishers such as Microsoft, Adobe, IBM Passport, VMware and more, GBS employees are experts at understanding what each publisher requires for licensing. Therefore, we can help your organization – no matter the size or industry – more quickly and easily manage the entire process.

Centralized Managed Storage

Our knowledgeable staff can quickly and easily make sure your storage demands and capacity match in order to keep energy costs down. We also anticipate your future storage needs so that adjusting capacity later is simple, fast and economical. To keep productivity up, GBS does it all without interrupting your operations.

Security and Network Access Control

Our team at GBS has guarded organizations of all sizes from networking threats through the installation of firewalls, intrusion detection systems and virtual private networks (VPNs). We insightfully offer the most comprehensive security solution for your company, integrating it into all facets of your network so it proactively recognizes suspicious activity, identifies threats and coordinates a response to attacks.

Server Consolidation and Virtualization

GBS knows how to best assess your current server situation and reorganize it for increased productivity. We do this through server consolidation and virtualization, which allows data from multiple servers to be accessed from one. This way, the number of servers running applications and operating systems is reduced and the servers in operation are more fully utilized than before.

Disaster Recovery Services

Organizations depend so much on their enterprise and network infrastructures to conduct business, that any disaster interrupting their system also halts operations, causes lost market share and, in some cases, finishes them.

An effective disaster recovery plan is complex, but GBS employees are skilled at recognizing your company's needs and customizing a plan that minimizes downtime and gets you moving again shortly after a disaster occurs.
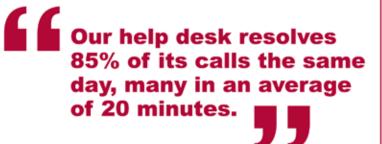

Managed Services

When your employees are busy fixing enterprise and network issues, they lose valuable time away from their regular duties, leading to lost profits.

Therefore, GBS offers a team of enterprise and network professionals who know computers, networks and servers inside and out, but also take the time to understand your business. Anticipating your needs allows us to create a proactive plan for hardware maintenance, software updates and device monitoring, preventing potential problems before they occur. And our experts ensure quick service and minimal downtime.

With your employees on task, a focused enterprise and network team in place and preventative measures in practice, you'll find increased productivity and reduced costs.

Services:
- Desktop management
- Network management
- Server management
- User management
- 24/7 help-desk support

> **Our help desk resolves 85% of its calls the same day, many in an average of 20 minutes.**
