

# Remote Patient Monitoring

## Introducing an innovative Continuous Care Platform poised to make a difference in the care of your patients

As a reliable solutions provider, GBS is pleased to introduce **Remote Patient Monitoring** for physicians and hospitals. Through this Continuous Care Platform, we enable providers to offer premier healthcare to their patients remotely, garnering addictive patient loyalty and true engagement.

With our Remote Patient Monitoring platform, “always-on” healthcare is delivered to patients at home, opening the door to an innovative way to monitor quality care and enhance outcomes.

### Continuous Care

Continuous care has increasingly become a primary goal of health systems seeking to provide premier, leading-edge healthcare that has real potential to benefit both the patient and the practice.

With GBS’ Remote Patient Monitoring, continuous care has become a reality—thanks to fine-tuned technology that enables monitoring outside of typical clinical settings, such as in the comfort of the patient’s own home.

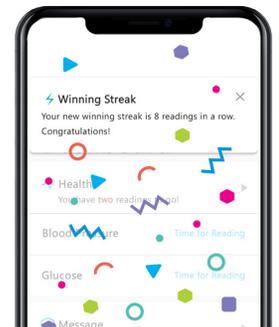

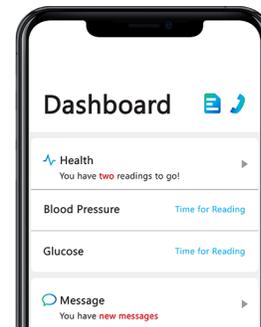

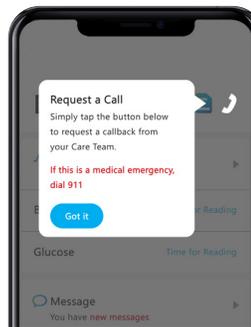

### Simplicity and Ease in Remote Patient Monitoring

- **Zero Set-up:** Devices come pre-configured and set up out of the box, including a mobile device for hypertension, diabetes, heart failure and oncology

- **No Technology Confusion:** Devices are “senior simple” and automatically transmit vitals to the EHR and care team

Users benefit from simple yet practical features like auto shut-off to avoid battery drain

- **No WiFi Connection Required:** While the gateway works on home WiFi, devices are designed to transmit over cellular networks, ensuring data always gets to clinicians in time to intervene

Think of Remote Patient Monitoring as “Air Traffic Control” for patient care, providing greater visibility into the daily lives of patients, with early detection and powerful control over behavior change and outcomes.

## Care Team Support

Patients might forget to take their meds, need emotional encouragement to take that daily walk or require medical interventions or escalations. Whatever your patient requires—physically, socially or emotionally—we have you covered. Results include lower hospital admissions and readmissions, improved quality metrics and higher patient retention.

## Real-Time Monitoring of Patient Populations

Remote Patient Monitoring delivers custom monitoring kits targeted to chronic conditions. Built with seniors at the center of our design, our solution does not rely on WiFi or Bluetooth pairing. Patient data is sent live via cellular network. Data integrates directly into all leading EHRs in real-time and HIPAA and ISO standards ensure best-of-breed security and governance.

### Continuous Care Clinical Results

### 2021 Hospital System Implementation

Nearly 100% of patients self-measured vitals daily, while average revenue generated per month per patient was **\$184.25** or **\$2,211 per annum** per patient.

**April**  
97%

**May**  
100%

**June**  
98%

Remote Patient Monitoring CPT Codes: 99453, 99454, 99457, 99458

### What Does Continuous Care Mean for Workload on the Provider?

- Reduced burden on providers via “Digital Care Pathways” and “Signal from Noise” algorithms
- Recent case study showed 68 escalations from 1,054 alerts, requiring provider for 2 escalations or 2.9%
